To Whom it May Concern:

I started my post-collegiate career by expanding my previously established role as a Systems Engineering Co-op at General Dynamics working in the subsurface domain. As part of this role, I increased my knowledge of the subsurface domain, gained experience working with other customer representatives, and gained a solid fascination with that area. This particular position, while giving me room to bring value to the company, left me wanting more hardware development experience. I then transferred into hardware engineering as an Electrical Engineer. This position has exposed me to the world of hardware design for subsurface applications. I have proven my abilities by writing and executing the qualification test plan for an inherited piece of hardware. While this is closer, I would prefer to be designing hardware. My previous Co-op at Space Exploration Technologies Corp. allowed me to design test articles, and my personal hobbies have given me cause to design and create PCBs, and the firmware required to use them. I am looking for a position which will allow me to flex my design muscles to create hardware, or the embedded software which runs on said hardware.

Thank you for considering me for this position.

Sincerely yours,
Christopher R. Culpepper
